

Crane rail pads are designed to allow the rail to move and rotate by small amounts. When rails are on pad - called soft mounting - this helps to ensure a more even stress distribution between the crane wheel and rail and also between the rail and the surface on which it is fixed. ROMACKcrane sells pads provided by Gantrail and SM-Schiententechnik.

Product	Type	Data File
Crane Rail Pads	Mark II (Gantrail)	Datasheet
Crane Rail Pads	Mark VII (Gantrail)	Datasheet
Crane Rail Pads	I-IT (SM-Schiententechnik)	Datasheet
